Creating a Random Spiral Function Code

```
#RandomSpiralsFunction.py

import random

import turtle

t = turtle.Pen()

t.speed(0)

turtle.bgcolor("black")

colors = ["red", "yellow", "blue", "green",

        "orange", "purple", "white", "gray"]

# Define a function to draw random spirals

def random_spiral():

   t.pencolor(random.choice(colors))

   size = random.randint(10,40)
```

```
    x = random.randrange(-turtle.window_width()//2,
                         turtle.window_width()//2)
    y = random.randrange(-turtle.window_height()//2,
                         turtle.window_height()//2)
    t.penup()
    t.setpos(x,y)
    t.pendown()
    for m in range(size):
        t.forward(m*2)
        t.left(91)

# Now, use the random_spiral() function to draw spirals!
for n in range(50):
    random_spiral()
```
