

Lists in Python Code

```
# ColorSpiralInput.py

import turtle

t = turtle.Pen()

t.speed(0)

turtle.bgcolor("black")

# Set up a list of any 8 valid Python color names
colors = ["red", "yellow", "blue", "green",
"orange", "purple", "white", "gray"]

# Ask the user for the number of sides
sides = int( turtle.numinput("Number of sides",
"How many sides do you want (1-8)?", 4, 1, 8))

# Draw a colorful spiral with the user-specified number of sides
for x in range(360):
    t.pencolor( colors[x % sides] )
    t.forward( x * 3 / sides + x)
    t.left(360 / sides + 1)
    t.width(x * sides / 200)
```
