

The While Loop: Till it Ain't So Code

SayOurNames.py - lets everybody print their name on the screen

Ask the user for their name

name = input("What is your name? ")

Keep printing names until we want to quit

while name != "":

Print their name 100 times

for x in range(100):

Print their name followed by a space, not a new line

print(name, end = " ")

print() # After the for loop, skip down to the next line

Ask for another name, or quit

name = input("Type another name, or just hit [ENTER] to quit: ")

print("Thanks for playing!")
